	Responsive design Figma English

Further information

About me	Since childhood, I have been interested in solving logical problems and the world of IT, and back in 2006 I wrote my first website using an ordinary web-notepad when I was at school. After school, I entered Kazan State University, where I studied in the specialty "Business Informatics". Despite the fact that I received a master's degree, after graduating from university, my paths with IT temporarily diverged and my wife and I opened our own travel company, where we worked until its closure during the pandemic. But the passion for IT and the desire to create websites with my own hands did not disappear and I began to study the modern technology stack of front-end development. To improve my knowledge, I want to Yandex Practicum courses. In addition, I took ItGid courses and studied countless open sources on my own daily. So web development has become my passion.
